

# SS PLUS +

SOILIZATION STARTER

 **Kaptor**

# SS PLUS+

## SOILIZATION STARTER

### PRODUCT FEATURES

- Increases soil fertility by promoting beneficial microorganisms in the soil.
- Encourages root development. (Rooting)
- Facilitates the absorption of nutrients by disassociating organic matter in the soil.
- It strengthens the plant by ensuring strong rooting.
- It changes ecologically and mechanically into entire root of plant structure in the layer of sand.

Thus , soilisation (Soilization Starter - SS) is being initiated into the ecological cycle.

- Increases drought resistance.
- It prevents nutrients from being washed out of the soil.
- By ensuring plants are well fed, the plants' natural immune system is strengthened against negative environmental factors.
- It provides balanced and uniform feeding by increasing the plants' absorption of nutrients.
- It facilitates nutrient uptake under adverse weather conditions.
- It promotes seed germination.
- It increases uptake by chelating the plant's nutrients in the soil.
- It decreases salinity by breaking up the salt in the soil.
- Since the harmful effect of salt is mitigated, plants are able to absorb water more effectively.
- By breaking up the lime in the soil, it allows the uptake of nutrients that are unabsorbable in limey soil.
- By reducing the pH of the soil, it increases the uptake of iron, zinc, manganese, phosphorus, and boron which are unabsorbable at high pH.

### GUARANTEED CONTENT (%w/w)

TOTAL ORGANIC MATTER: % 20  
TOTAL (HUMIC + FULVIC) ACID: % 3  
MAXIMUM MOISTURE: % 20  
PH RANGE: 6.0 - 8.0

### USAGE AND DOSAGE

Palms	20 kg / piece
Trees	20 Kg / piece
Large bushes	4 Kg / piece
Small bushes	2 kg / piece
Suculents	1 kg / m <sup>2</sup>
Grasses	2 kg / piece
Groundcovers	4 kg / m <sup>2</sup>
Turf	4 kg / m <sup>2</sup>
Plant in pot	25 kg / m <sup>3</sup>

### ATTENTION IN USE

- KAPTOR SS PLUS+ should be used by mixing it with soil.
- When used in fruit tree farming, KAPTOR SS PLUS+ should be delivered to the crown projection area and be plowed into the soil.
- KAPTOR SS PLUS+ cannot be used in drip irrigation, since it is not water soluble.
- KAPTOR SS PLUS+ should be applied together with the fertilization program in order to get better results
